

Important!

You Must Re-Brand The Mobile Website Buddy Software Before You Create The Funnel Pages. If You Haven't Already Done That Do That Now!

Instructions:

This Software Will Create 6 Pages, Images and javascript codes for the animated text and image effects

This Software Creates:

- 1 Squeeze Page With Direct Download button,
- 1 Squeeze Page With Autoresponder Opt-in Form.
- 1 Optimized Download Page,
- 1 Software Registration Page,
- 1 Registration Success Page,
- 1 Redirect After Opt-in Page.

Read The Hints and Tips Carefully Before Proceeding To the Next Step.

indexwithformcode.html (Opt-In squeeze page)

indexwithbutton.html (Direct Download Button Squeeze Page)

(Which Ever Squeeze Page you are going to use change the file name to index.html)

download.html (Your Download Page to Deliver Your Branded Software)

redir.html (Redirect Page After Opt-in)

reg-code.html (Your Registration Page that will build your list)

success.html (Your Success Page if you want to deliver the Registration code Instantly) (Optional)

I started using the success page because email services like Outlook and Yahoo etc... are blocking so many emails these days that I was getting support tickets that my subscriber never got their email with the software registration code. This is Optional and you can send them anywhere you like after they Register.

Before you start the Branding Process Get the Following Items Ready:

1: The Autoresponder HTML Form Code For The Squeeze Page.

After entering their name and email you can redirect them to a special offer or a Thank You for Subscribing Page.

The Software will create a Redirect Page that you use as a buffer after they enter their Name and email. It is a timed page that tells the subscriber the download link is being delivered to their email address and that they are now being redirected to a special offer. Have this URL Ready.

You Will Put the

<http://yourwebsite.com/folder/redir.html> URL n your Autoresponder Custom Thank You Page Option when you create your Squeeze Page Autoresponder Form Code.

If You are using the Direct Download Button You will Need the URL you are sending the Visitor to. If you are sending them to a special offer you should have your download page link on the top or bottom of your Special offer Page.

You Have the Option to Create Both Squeeze Pages.

2: Your Zip File Download URL: After Your Software is Re-Branded and Compiled into a single application, create a zip file and Upload it to your server

3: Your Software Registration Autoresponder Form code.

This is the page you send them to register their software.

Create a welcome email with the registration code included and set your campaign to Day 0

If you want to deliver the registration code immediately after

They Opt-in then you put this URL in your autoresponder custom thank you page option. <http://yourwebsite/folder/success.html>

4: The Registration Code You Created When You Branded The Software.
The Software will Embed the Registration Code on the Success Page.

5: You Have the Option to Optimise your Download Page with 5 Banner Codes IMPORTANT: Do Not Let your Banner Size Exceed 720px wide or you'll blow the page apart!
Have Your Banner Codes Ready.

AFTER YOU HAVE ALL THOSE ITEMS READY

1: Open the Bonus Funnel Builder folder and Open or double click "Funnel-Builder-Software.exe" to run the Funnel Builder Software.

2: Enter Your Details when prompted **(Refer To Hints and Tips)**

3: Save The Files To An empty folder on your desktop or where you can find them.

4: Upload “ALL the files” the software created into a folder on your server
Note: The Software will create a bunch of files. Don't let this concern or confuse you. The Only Files you Need To Be concerned about are The HTML Pages

These URLS Are Only Examples!

Your URLs should look like this:

<http://yourwebsite.com/folder/> (index.html) (Squeeze Page)

<http://yourwebsite.com/folder/download.html> (Download Page)

<http://yourwebsite.com/folder/redir.html> (Redirect After Opt-in Page)

<http://yourwebsite.com/folder/reg-code.html> (Software Registration Page)

<http://yourwebsite.com/folder/folder/success.html> (Success Page)

That's It! You're Done!

Thank You!
